4.4 Secure File Transfer	
4.5 Manage Secure Contacts	

① Security Warnings

- Do not allow access to the secure PC device by other people.
- Do not allow installation of non-trusted software on the secure phone.

② Installation

- Click on "setup.exe"
- A simple installation wizard will perform the SecureLock Enterprise installation on the computer.

③ Configuration

- When SecureLock is first activated, you will need to input the following details:
 - Login details - the email and password of your SecureLock account
 - Select a name for your secure device. This will be used by you and your secure contacts to identify your device.
 - In setting screen, a few parameters are available for modification, there is no need to change any parameter unless requested by a SecureLock support agent

4 Usage

4.1 Add Secure Contact

- Select Menu => Add Contact
- Insert the device name of your secure contact and confirm.

4.2 Secure Voice call

- At least one secure contact needs to be in your contact list
- To initiate a secure voice call, highlight a secure contact, then select Call (contact has to be online)

4.3 Secure Text

- To send a secure text message, highlight a secure contact, then select "Text" (contact has to be online)
- Inset text, then press the "Send" button .

4.4 Secure File Transfer

- To securely send a file, highlight a secure contact, then select "File" (contact has to be online)
- Select the file you wish to send, secure transfer will then begin.

4.5 Manage Secure Contacts

- Sign in to your account at www.gold-lock.com to manage everything related to your device and secure contacts
